

The Honorable Michael K. Powell
Chairman
Federal Communications Commission
445 12th Street, S.W.
Washington, D.C. 20554

Dear Chairman Powell:

I'm writing to urge you to support the proposed merger between EchoStar Communications and Hughes Electronics. I believe the merger holds tremendous potential for my company in GRAND JCT, CO which sells EchoStar's DISH Network satellite TV service. The new company will offer a more attractive product to consumers, and this will mean more business for my company.

None of my customers can receive their local broadcast channels via satellite because the DISH Network does not have the channel capacity to carry smaller television markets. Most cannot receive them clearly with off air antenna. General due to ghosting, if not that low signal strength, because of the location that we live in here in Western CO. And since you have given the local stations exclusive monopoly rights within 50 miles of their transmitters, most only have access via cable TV. The TV stations will not grant waivers to those that cannot receive their stations clearly, and since there is not a third party to verify reception quality TV stations do as they will, meaning consumer loses out. Currently, EchoStar offers service in only 36 markets. This is a source of frustration for my consumers. The proposed merger between EchoStar and DIRECTV would allow the combined company to offer local broadcast channels in all 210 television markets nationwide by eliminating the duplication of identical programming carried by both services. If the merger is approved, satellite TV will be a more competitive alternative to cable, and this is good for business.

If the merger is approved, the new EchoStar will provide consumers in my area an affordable high speed Internet access service via satellite. There are a small number of customers in my area who do enjoy access to high-speed Internet access service via cable and DSL service. For them, this merger will result in increased competition in the broadband market, potentially driving down prices of DSL and cable providers. However, the majority of the homes, schools and businesses in my area are beyond the reach of cable and DSL wires. For these customers, the new EchoStar would be their only chance of getting an affordable high speed Internet service.

This merger will increase satellite TV's ability to respond competitively to the roll out of digital cable, forcing cable companies to respond in a variety of ways including accelerating their digital upgrades and extending their wires out to reach those customers they currently do not serve. The resulting expansion in digital capabilities across the board will increase competition generally, will drive hardware upgrades for consumers, and drive retail traffic and sales nationwide.

Since its inception, direct broadcast satellite TV providers have offered uniform, nationwide pricing structures, and the new company has guaranteed that it will continue this practice. Nationwide pricing offers customers in rural America the full benefits of the rigorous competition occurring in urban

urban and suburban areas. I can rest assured that satellite TV will remain a competitively priced product.

Please support the merger between EchoStar Communications Corporation and Hughes Electronics. There are many benefits of the merger, but I believe that at most importantly, the new company will increase competition with cable and help hold down cable rate increases. These savings, in turn, will be passed along to customers, which will be good for my business.

Sincerely,

RON MOORE
